- 1) **Historical Name:** Red Mountain Ski Area
- 2) **Common Name:** Red, Red Mountain, the Ski Hill
- 3) **Location:** off Highway 3B, approximately 3 kilometres from northwestern Rossland
- 4) **Date of Construction:** 1947

STATEMENT OF SIGNIFICANCE

Description:

The Red Mountain Ski Area is located in the Rossland range in southeastern BC. It encompasses 4,200 acres of land in the northwestern portion of Rossland and is anchored by Red Mountain, Granite Mountain and the Red Mountain lodge. The entrance to the Red Mountain Ski Area is approximately three kilometres from Rossland's historic downtown.

Heritage Value:

The Red Mountain Ski Area has played a major role in Rossland's identity since 1947. It is the oldest ski operation in Western Canada brought about with the amalgamation of local ski clubs and the erection of the Red Chair lift and the Red Mountain lodge. The Ski Hill is a testament to the vision and initiative of local outdoor enthusiasts who provided all the skills and labour needed to establish the ski operation. It also reflects the considerable assistance of Consolidated Mining & Smelting Company (now Teck) in contributing to the development of the region's most recognized recreational resource. A non-profit society operated the Ski Hill for 40 years and this contributed to a strong feeling of ownership within the community.

Red Mountain is the most significant landmark in Rossland. Its striking conical shape is visible from all parts of the city. The developed north side of the mountain, including the very challenging War Eagle and Cliff ski runs, forms a natural amphitheatre for the base lodge. Spectacular vistas of the city and surrounding areas are seen from the top of Red, Granite, and Grey Mountains. The ski runs and lift lines, cut into the naturally forested slopes, are seen from many miles away.

The historic significance of Red Mountain itself predates the creation of the Ski Area. It was the primary site of extensive gold mining operations that spawned Rossland. There is evidence of this industrial past in the abandoned mining sites and the ore dumps in the Ski Area today. The original Black Bear compressor building, moved and refitted to its present site in 1947, became the Red Mountain Ski Lodge and the names of many ski runs reflect the area's mining history.

The Ski Area's reputation of excellence is well established in the ski world today and is a source of pride for locals. Red is known for its challenging terrain, very successful ski racing programs and its ability to successfully host regional, national and international races. It is a major attraction in the winter months and is the reason why some visitors have decided to take up seasonal or permanent residency in Rossland.

The Red Mountain Ski Area is emblematic of the "mountain culture" that exists in Rossland today. Many individuals and families

value and pursue an active lifestyle, enjoying the variety of outdoor activities available in the immediate area of our small, alpine city.

Character Defining Elements:

- Location within the municipality of Rossland.
- Tangible evidence of past mining activity.
- Names of the ski runs reflect Rossland’s history.
- Original construction details of the Red Mountain Lodge.
- Retention of the naturally forested landscape.
